FIT FOR PURPOSE EQUIPMENT & PRE-START SAFETY CHECKS

Using the right equipment and conducting pre-start safety checks are crucial for a safe and efficient workplace. Outdated or inappropriate equipment can cause accidents, while safety checks can prevent potential hazards before starting work.

Make sure equipment is designed for the task at hand and is well-maintained. Conduct pre-start checks to avoid accidents and costly downtime.

By prioritising fit for purpose equipment and pre-start safety checks, you can ensure a productive work environment and prevent injuries or legal ramifications.

This is the first step in our safe work methodology; if you're unsure how to do this, please speak to your Manager right away.
